IBOXJT2 Edge Al

Embedded Industrial Computer

Product Brief

IBOXJT2 is an intermediate option of Vantron edge AI embedded industrial computer family. It is powered by the NVIDIA® Jetson[™] TX2 NX core module that features NVIDIA Pascal[™] GPU with 256 CUDA® cores, capable of delivering up to 1.33 TFLOPS compute performance—approximately 2.5 times the performance of Vantron IBOXNANO, an entry-level option powered by NVIDIA® Jetson[™] Nano core module. It also supports popular AI frameworks such as TensorFlow, Keras, PyTorch, Caffe, and MXNet for flexible deployment of AI applications.

IBOXJT2 provides dual gigabit Ethernet jacks, Wi-Fi 6, Bluetooth 5.0, along with 4G and optional 5G cellular connectivity to ensure stable and reliable interfacing with sensors, cameras, and other edge devices. Its edge computing feature enables data to be processed and analyzed at the network edge where data is generated before being transmitted to the data center. This significantly relieves the network congestion and reduces data latency. IBOXJT2 features rich interfaces, such as USB, RS232/RS485, CAN, GPIO, DI, DO for flexible user expansions. Its built-in ARM Trustzone technology, TPM module, SHA/AES algorithms ensure data protection and secure operation in edge deployments. Typical application of IBOXJT2 includes smart home, smart city, remote diagnosis, autonomous driving, etc.

Since its establishment in 2002 by two Silicon Valley entrepreneurs, Vantron Technology has been at the forefront of the connected IoT devices and IoT platform solutions. Today, Vantron boasts a global customer base that includes several Fortune 500 companies. Its product lines cover edge intelligent hardware, IoT communication devices, industrial displays and BlueSphere cloud device management platform.

With over 20 years of experience in R&D of embedded edge intelligent hardware, Vantron has provided users with diverse embedded solutions featuring ARM and X86 architectures. Its offerings range from Linux to Windows, from embedded to desktop level, and from gateway to server. In addition, it provides users with system clipping, driver transplantation and other related services.
