

IBOXNANO Edge AI

Embedded Industrial Computer

Product Brief

Vantron IBOXNANO is an entry-level edge AI embedded industrial computer, powered by the NVIDIA® Jetson Nano™ core module, which integrates a quad-core ARM Cortex-A57 MPCore CPU and NVIDIA® Maxwell™ GPU with 128 CUDA® cores to deliver up to 512 GFLOPS compute performance. It also supports popular AI frameworks such as TensorFlow, Keras, PyTorch, Caffe, and MXNet for flexible deployment of AI applications.

IBOXNANO offers a gigabit Ethernet jack, Wi-Fi 6, Bluetooth 5.0, along with 4G and optional 5G cellular connectivity to ensure stable and reliable interfacing with sensors, cameras, and other edge devices. Its edge computing feature enables data to be processed and analyzed at the network edge where data is generated before being transmitted to the data center. This greatly relieves the network congestion and reduces data latency. IBOXNANO features rich interfaces, such as USB, RS232/RS485, CAN, GPIO, DI, DO for flexible user expansion. Its built-in hardware-based encryption, TPM module, encryption/decryption algorithms ensure data protection and secure operation in edge deployments. Typical application of IBOXNANO includes smart grid, smart city, intelligent monitoring and management.
